

Oct. 9 1958

Dear Av:

I'm just sending along some of the previously threatened grist for your Stanford file. Do let me know if you are having any change of heart; we will have to start moving along some alternative lines (-> Silvers?) before very long. Though this would not necessarily precluding some arrangements with you still, these would be more complex.

Nothing too hot on the scientific front; Peter Sneath's here (for the year) from Mill Hill and we've been repeating some preliminary experiments on the inactivation of male virility in coli with periodate.

As ever,

Joshua Lederberg

Do make some allowances for the enclosures; they were written for a somewhat different purpose, but I think they will serve to have down on paper the same ideas we've already discussed in conversation.

Enc. Memo to Alvin & Sam Webb etc
